07:00 to 15:00 GMT+0200

## Technical tour

## A market accelerating approach

With 2 days of plenary and technical sessions and 1 day dedicated to technical visits, FOWT offers an international program dedicated to the latest innovations and research in the floating offshore wind sector for each edition.

"FOWT's scientific and technical sessions" will be held in parallel with the plenary sessions of FOWT on May 11. They are organized in partnership with France Energies Marines, the energy transition institute dedicated to marine renewable energies.

By coordinating and driving shared R&D projects, France Energies Marines provides, enhances and feeds the scientific and technical environment necessary to remove the obstacles facing the marine renewable energy sector.

FOWT is also the privileged place for business with networking highlights (BtoB / meet the buyers, lunches, gala dinner).

## Technical visits

The Pays de la Loire region organize technical visits with the aim to introduce you to the expertise sites dedicated to marine renewable energy as part of the 3rd day of FOWT.
